Organizational self-evaluations for preparedness

Foundational tools investments to enable widespread adoption of generative and agentic AI

AI governance framework examples: NIST & Singapore

Singapore

Model AI Governance Framework for Agentic AI

1. Assess and bound the risks upfront
2. Make humans meaningfully accountable
3. Implement technical controls and processes
4. Enable end-user responsibility

Four dimensions of the MGF for Agentic AI

Understanding AI governance considerations

Stakeholders

- Legal
- Privacy
- Security
- Procurement

Topics of Concern

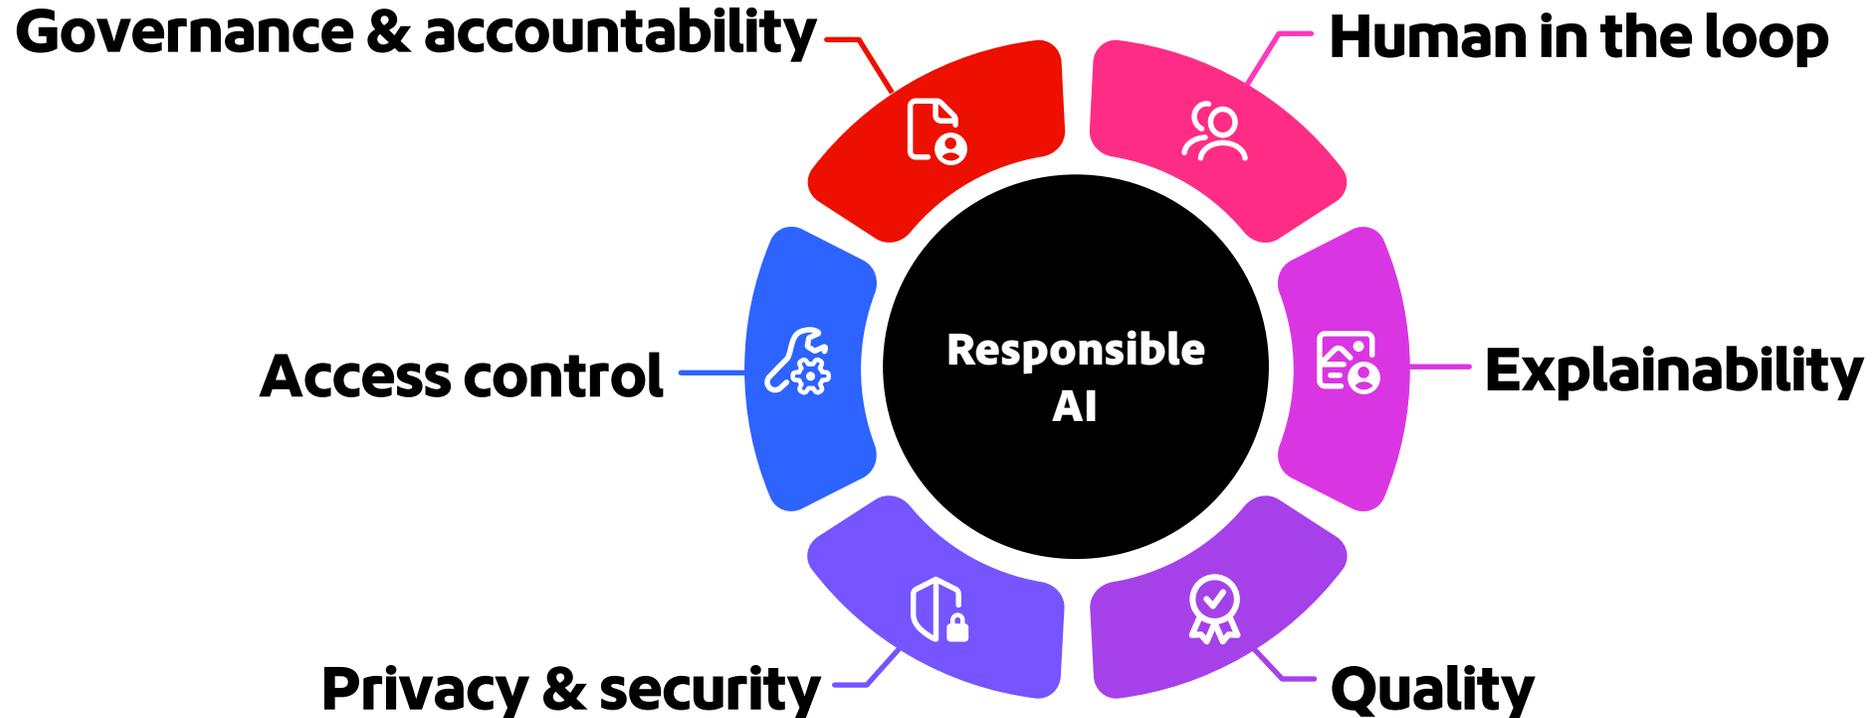

- Data use for training
- Intellectual property
- Copyright indemnification
- AI testing
- Pen testing

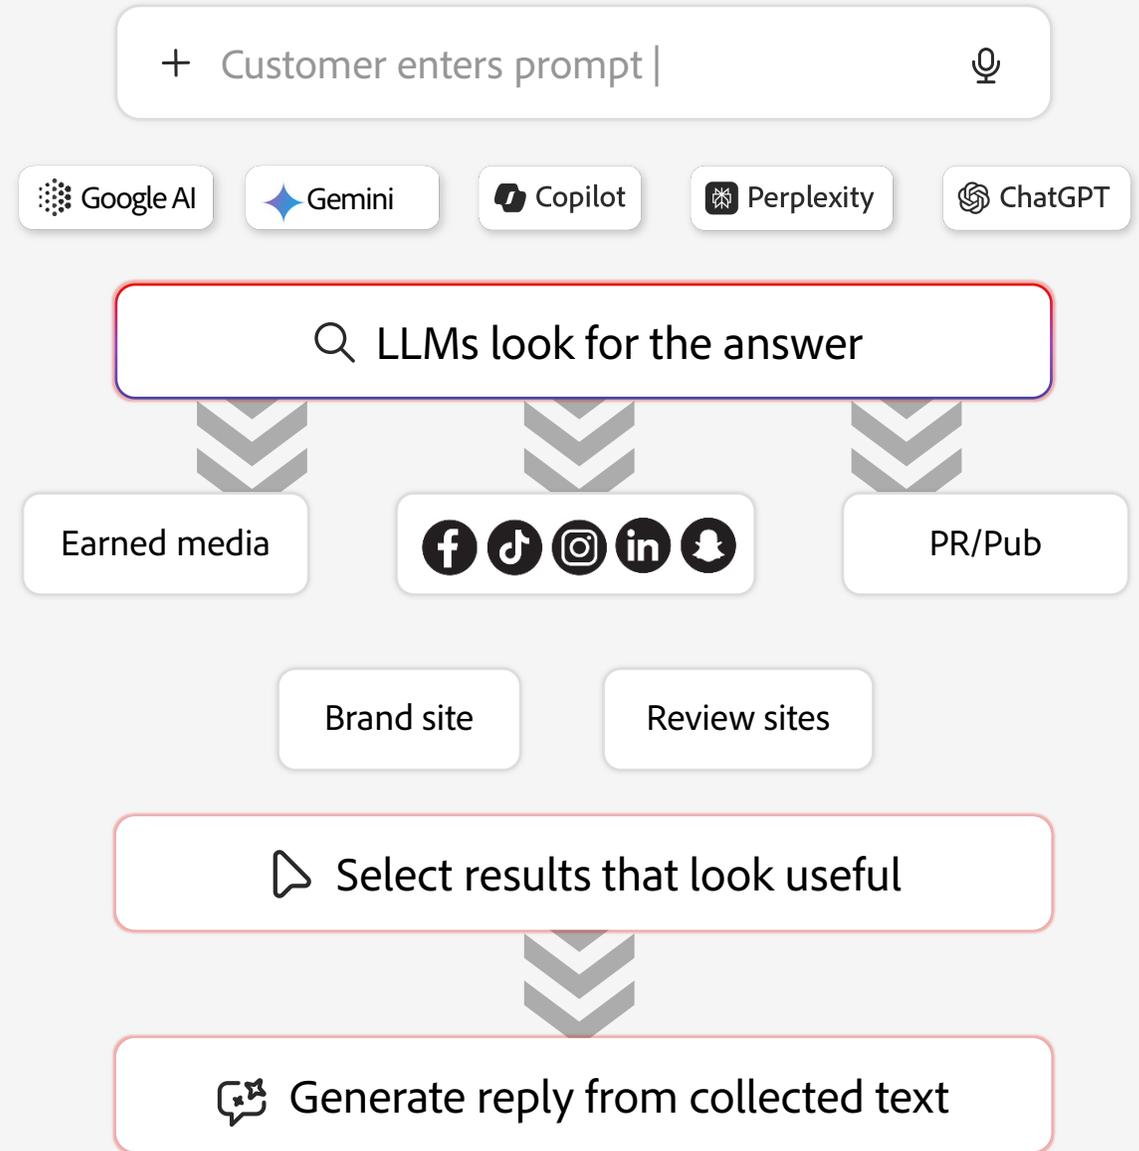

How Concern is Voiced

- Are you training on my data?
- How do you ensure data compliance?
- What security audits have been conducted?
- What liability do you assume for errors or bias?
- What are IP terms for generated content?
