

Payment Services for Adobe Commerce and Magento Open Source

Streamline transaction management for a better checkout experience

Help merchants create a more personalized checkout experience their customers will love, with more support and less hassle. Payment Services for Adobe Commerce and Magento Open Source offers significant value to ecommerce businesses with a native payment solution.

Onboarding is easy, with out-of-the-box integrations and a SaaS-based solution that saves time and resources. Merchants can quickly optimize the checkout experience by customizing payment methods to meet their preferences and customer needs, whether on the product page, mini-cart, or checkout page. Payment Services also helps merchants meet stringent PCI DSS/3DS compliance requirements and offers optional fraud and chargeback protections through our trusted partners for added security and peace of mind.

Sohars All Season Mower Services is an Adobe Commerce customer that experienced a surge in sales, accompanied by an increase in credit card fraud. Initially, Sohars assigned dedicated staff to manually review each transaction, eventually removing certain payment methods altogether. But for long-term success, Sohars needed a new payment provider that catered to its customers' needs while also providing fraud and chargeback protection options.

Payment Services provided Sohars with:

More payment methods

Simple and secure checkout for credit cards or debit card methods, plus Apple Pay, PayPal payment buttons, and card vaulting.

Fraud and chargeback protection

Chargeback and fraud protection services through Signifyd or PayPal to mitigate the risk of fraudulent transactions.

A single solution for all payment needs

Simplified support and operational efficiencies with an all-in-one solution.

With Payment Services, you can:

Grow the business.

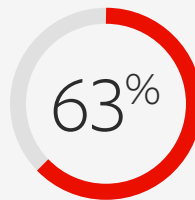

Payment Services helps merchants optimize the checkout experience and customize payment methods. Merchants can increase conversions by catering to customers' checkout and payment preferences, reducing friction and cart abandonment. And by providing customers with more flexible payment options like buy now, pay later (BNPL), merchants can encourage customers to buy more items or higher-priced products than they might have otherwise, increasing average order value.

Increase operational efficiency.

Payment Services simplifies setup and increases speed to market. Effortlessly update and introduce new payment methods, personalize checkout, and improve the customer experience. Easy-to-use backend transaction monitoring and reporting tools offer valuable insights into payment performance, payouts, and transaction-level reporting for greater transaction visibility.

Trust the experts.

Payment services for Adobe Commerce and Magento Open Source offers an all-in-one solution that minimizes the effort it takes to maximize revenues. Stay up-to-date and rely on steadfast support from Adobe, spanning from initial onboarding and PCI DSS/3DS compliance to expert advice on optimizing the payment experience.

of respondents globally consider optimized checkout experiences important when it comes to creating the ideal shopping research and buying experience when paying for a product.¹
