Document workflows present unique challenges.

Document work is evolving from something static and manual to something dynamic and intelligent. AI is now expected to help teams not just read or edit documents — but understand, summarize, and suggest what to do next.

This shift is changing how organizations think about business productivity: it's no longer about doing the same tasks faster but about doing smarter work with less effort, so teams can move from information overload to clarity, make faster decisions, and unlock more value from the data they already have.

More than 400 billion PDFs were opened and 16 billion documents edited in Adobe Acrobat in the last year.

The all-in-one platform where comprehension meets creation.

But now there's a real solution. Adobe Acrobat Studio is the unified, AI-powered platform that brings PDF tools, document comprehension, collaboration, and content creation together in one place. Teams can easily extract insights from documents, collaborate and share files in an interactive workspace, and create polished outputs — from strategy decks to decision memos to public-facing content — without leaving Acrobat Studio. Along with that, Acrobat Studio gives IT teams centralized control, ease of implementation, and the strong security that businesses depend on.

Get insights

Document intelligence benefits your entire business.

Teams from legal, finance, HR, marketing, and sales rely heavily on document-originated workflows. Many of those workers have no design training but need to take the insights in those documents and turn them into derivative written or visual content, which can cause delays and produce messaging that's off brand, unpolished, or unclear.

The majority of workers have a need for speed in documents. More than half (57%) cite faster workflows as AI's most significant outcome.

All four Cs, all from one platform.

Where once the four main pillars of document workflows were disconnected, Acrobat Studio now unites every aspect of the process within a single solution. Built on the familiar Acrobat platform that businesses already use, Acrobat Studio is easy to adopt, and its powerful new features have been designed to meet every team where they work.

Comprehension

AI Assistant in Acrobat Studio helps you comprehend information using conversational prompts or questions.

- Automatically extract key insights from lengthy documents hundreds of pages long or from multiple documents simultaneously, including reports, contracts, transcripts, and even charts, tables, or figures
- Get traceable citations and sources so teams can work with accuracy and confidence
- Generate AI-powered presentations from your documents and data so you can clearly communicate insights to others

Forrester projects up to 45% faster document analysis and 176%–415% ROI over 3 years from Acrobat AI Assistant capabilities.

Collaboration

Acrobat Studio PDF Spaces powers intelligent, interactive document creation and collaboration. Keep all your documents and feedback in one secure place to help teams manage how information is shared, reviewed, and advanced across your organization.

- Extract insights from any document using prebuilt AI Assistants or create a customized assistant to guide stakeholders to what matters most
- Use Share for Review to let recipients chat with AI Assistant and add comments and files
- Apply logos for branded sharing
- Track recipient views so teams can strengthen follow-through and make every document interaction measurable and actionable

Creation

And now with Adobe Express Premium included as part of Acrobat Studio, even non-designers can take the strategic insights from their original documents and create polished, on-brand content for presentations, proposals, strategy decks, videos, and so much more.

- Access predesigned templates and brand kits for presentations, flyers, proposals, infographics, and social content
- Use intuitive editing tools and access more than 280 million royalty-free stock images, videos, and more to personalize content for any audience
- Generate visuals, remove backgrounds or objects, resize layouts across channels, and translate content using AI-powered design tools
- Share presentations instantly via public link, live presentation, or export as PDF or PPT for any audience or workflow

“Acrobat Studio represents a leap forward in productivity and creativity, leveling the playing field by enabling individuals and teams to create compelling, audience-ready content faster with AI-powered assistance.”

Liz Miller

Vice President, Principal Analyst

Control

Acrobat Studio helps business pros control PDFs, Office documents, slides, spreadsheets, transcripts, web links, and more.

- Share final reports securely as PDFs for sign-off, plus auditability and compliance
- Edit, redact sensitive information, or convert docs into other formats with high fidelity from one secure space
- Use AI-guided actions, like identifying follow-up steps, highlighting risks, or preparing content for downstream workflows, to move work forward

It's about time — and trust.

Time is always at a premium, and Adobe Acrobat Studio is designed to be simple for IT teams to integrate with existing workflows, as well as for users to start working.

But when it comes to AI solutions for businesses, trust is equally important. Adobe addresses security concerns by ensuring that Acrobat AI Assistant is only looking at the documents you tell it to and customer data is not used to train generative AI models. Beyond that, IT and security teams can set permissions and manage access and usage across departments from the admin console. And that means that there's less opportunity for unapproved or rogue software to make it into your business's workflow.

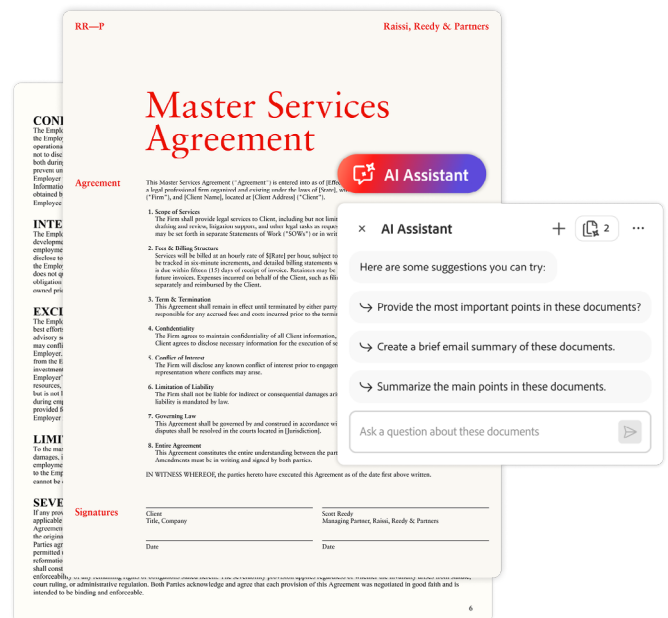

AI use in Acrobat workflows has surged 371% year-over-year, signaling exponential interest and growth.

Financial documents (+347%) are growing faster than any other document type, followed by legal (+281%) and human resources (+261%).

Success is a team sport.

It's clear that demands for document-based workflows are key to most teams across organizations. Some, like legal, finance, and HR, are more geared to analysis and producing derivative document collateral such as contracts, briefs, and reports. Sales and marketing, on the other hand, are tasked with producing customer or public-facing content that ranges from pitch decks and videos to social media posts and ads. And that's where the integration of easy-to-use creative tools makes a real difference in how, and how effectively, those teams can work.

For legal: Reduce hours of manual work.

Legal teams, tasked with reading and analyzing lengthy, complex contracts and regulatory documents, are always under pressure to deliver speedy results with extreme accuracy. Acrobat Studio helps teams:

- Analyze complex documents and contracts quickly
- Accelerate vendor risk assessment
- Expedite external-facing content review
- Turn complex policies into actionable guidance fast

Acrobat AI Assistant improves document summary and analysis efficiency by up to 45%.

Source: Forrester, *The Projected Total Economic Impact of Adobe Acrobat AI Assistant*

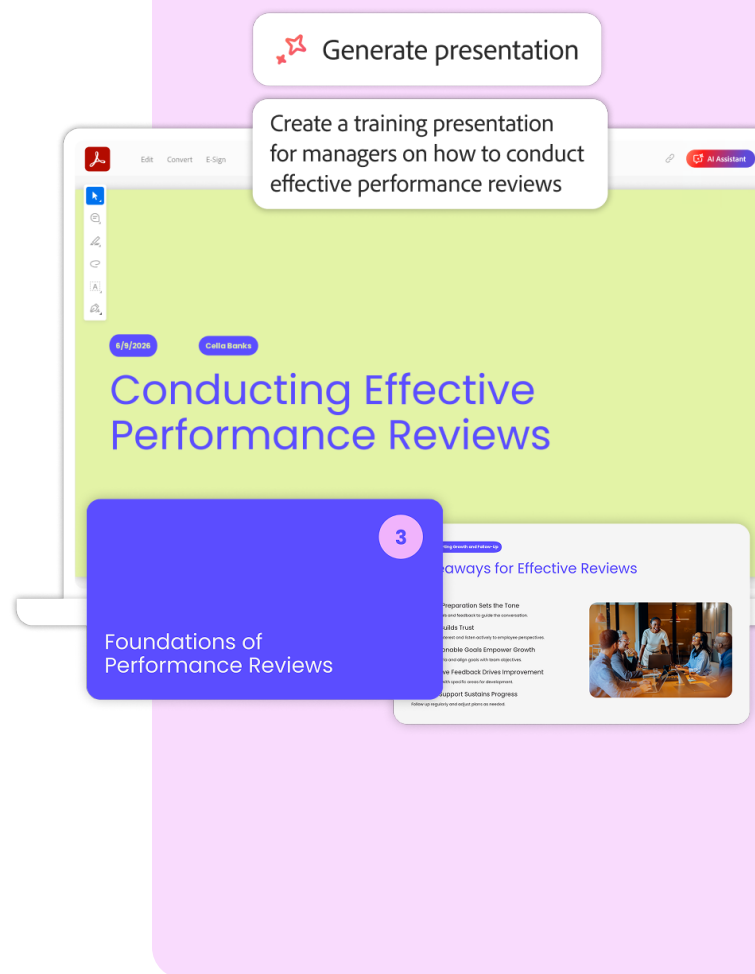

For finance: Control document overload.

Documents drive the financial professional's workflow on a daily basis. From tax forms and receipts to financial reports, spreadsheets, earning reports, and on and on, there's almost nothing that doesn't begin or end with a document. Acrobat Studio, powered by AI that specializes in document intelligence, helps:

- Accelerate financial reporting without compromising accuracy
- Turn forecasting complexity into decision-ready insight fast
- Speed vendor spend analysis to drive cost control
- Streamline audit preparation to reduce risk and rework

Almost all financial professionals (98%) actively edit, sign, combine, convert, and collaborate with PDFs — and more than one-third do so very frequently (11 times or more a month).

Source: Adobe, *Financial Professionals Love to Edit, Sign, Convert, and More with PDFs*

For HR: Expand your resources.

The tasks that fall to HR span everything from reviewing resumes and drafting employment contracts to creating educational and training collateral. Benefits packages and employment laws are always changing, and ensuring that internal and external comms are updated and accurate keeps HR professionals busy. Acrobat Studio reduces manual work:

- Streamline talent onboarding and training
- Enhance employee communications and engagement
- Turn complex policies into actionable guidance quickly
- Accelerate talent reviews and rewards decisions

“We can now generate and send all offer letters in five minutes, saving around 80 hours of work per acquisition. We can get offer letters out faster and make a better first impression with potential new employees.”

Ramya Ramakrishnan
Manager of Talent Technology
Adobe

For sales: Create pitches and proposals fast.

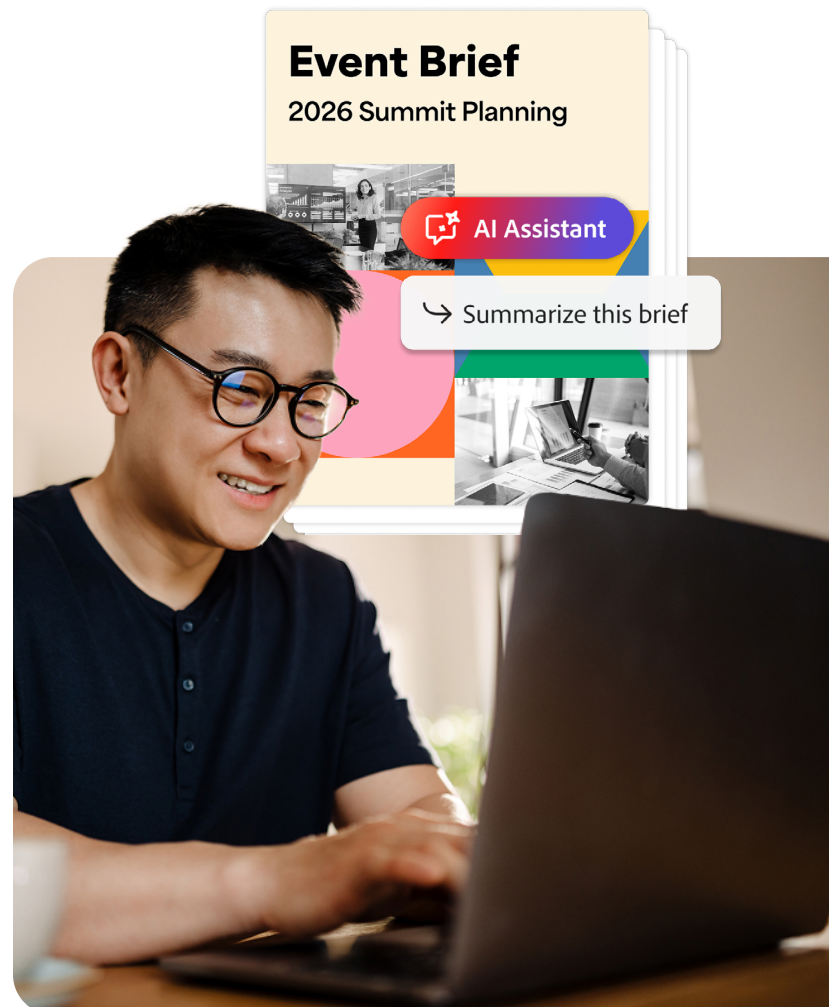

Sales teams know that the process of selling can be lengthy and involved. Prospecting, evaluating, and strategizing are, at once, critical and time-consuming. Then there are meetings, which involve preparing presentations and demos, followed by outlining terms and creating contracts with rounds of revisions and approvals. With a workflow that is as reliant on documents as on creating impactful visual collateral, Acrobat Studio helps increase deal velocity:

- Generate high-impact presentations in minutes
- Accelerate customer responses to keep deals moving
- Enhance contract and deal operations collaboration
- Fast-track sales enablement content for quicker deals

For marketing: Boost momentum across formats and channels.

There's perhaps no group that's more dependent on being able to process and produce multiformat content than marketing. Live events alone require collateral such as physical signage, flyers, ads, invitations, presentations, social media posts, and post-event summaries and takeaways, which means distilling vast amounts of information to create print, audio, and video collateral from it. Acrobat Studio reduces the challenges:

- Create event content across channels easily
- Reuse and adapt on-brand campaign content
- Localize global campaigns for your region quickly
- Create high-impact presentations and stories

Productivity is power.

The numbers are building a compelling case for workflows that are both integrated and powered by AI. From streamlining analyses to speeding the creation of on-brand, impactful new content, Adobe Acrobat Studio is the all-in-one platform that saves time and increases productivity, powering teams across almost every type of business.
