**AI Assistant**

Generating a response ...

Generative artificial intelligence (genAI) and AI agents have set off a tsunami of change as organizations seek to transform static and repetitive task-based work patterns. The goal: Create intelligent workflows that elevate productivity and boost output to drive growth.

The accelerated pace of technology and business change, fueled by the influx of AI technologies, is creating opportunities for business professionals — and more importantly, leaders in organizations — to think differently about how their teams work and collaborate. Tougher global competition, economic uncertainties, and mounting cost pressures mean companies must work smarter and faster to boost revenue and drive business growth.

Pressure is mounting for today's knowledge workers. Employees are no longer just executing tasks — they need to unlock insights, create impactful content, and deliver business value in short order. Yet information and application silos keep cross-functional teams from collaborating as effectively as desired. Next-generation employees, raised on seamless digital experiences and right at home with genAI technologies for individual work, expect easy access to those same capabilities in their everyday tools. Valuable knowledge is often underutilized, trapped in documents or so rampant that it's hard to cut through the noise. The bulk of business data — up to 80% according to industry estimates — is unstructured and

rarely analyzed. This scenario takes a toll on decision-making and worker productivity. The more than 3 trillion PDF files in active circulation worldwide are a treasure trove of relevant data, but they can get lost in the shuffle. "Once sent, PDFs are often forgotten and important context is lost, preventing them from being leveraged for enterprise goals," says Job Chanasit, principal product marketing manager at Adobe.

## Introducing Acrobat Studio, a unified platform for productivity.

Acrobat Studio is a modern workspace and AI-enabled productivity platform that transforms the way people work while maintaining the trusted security of the venerable Acrobat PDF environment. In a single platform, Acrobat Studio rolls up PDF and e-signature capabilities with embedded AI Assistant productivity enhancements, Adobe Express for creating standout content, and new PDF Spaces for enhanced collaboration. With new conversational knowledge hubs and the ability to unlock deeper insights in data tucked away in enterprise documents, Acrobat Studio helps teams accelerate decision-making, improve communications, and concentrate on higher-impact work.

### PROPOSAL

This letter is to propose our bid to construct your two-story residential property in Los Angeles, California, this coming October, for an estimated budget of \$800,000. See below for our construction bid proposal.

### SCOPE OF WORK

#### AGREEMENT

This construction project will be undertaken in accordance with requirements set forth in this contract.

#### SCHEDULE

Upon the signing of this construction contract proposal by both parties, work will commence October 2022 and be completed March 2023.

#### PERMITS

All required construction-related permits will be obtained prior to the project start date. It requests to obtain their own permits, they assume all legal responsibility for the completed work.

#### LOGISTICS

Contractor assumes sole ownership over excess materials used during the project and assumes responsibility for leaving the property clean and free of construction materials upon completion.

#### WARRANTY

Townsend Construction provides a guarantee against defects in workmanship and materials used in the construction process for a period of 1 year.

This contract is entered into by and between **Townsend Construction** and Mr. Robert J. Smith for home repair services.

The Acrobat Studio integrated platform approach mitigates two key IT pain points: securing critical document data and reducing multivendor management complexity.

Key capabilities include:

**Acrobat** for securely viewing, composing, editing, tracking, and managing PDF files. Use it to create interactive forms, compare, merge, and convert scanned documents to editable text, organize pages, and redact sensitive information.

**AI Assistant** offers secure genAI capabilities that allow users to interact with PDFs to get comprehensive summaries, surface insights, and save time. A Forrester study found AI Assistant improved document summarization and analysis efficiency by up to 45%. Built-in citations take users to the exact point in a document, verifying answers and building confidence in the responses.

**PDF Spaces** are project workspaces that centralize up to 100 documents — across PDFs, Office files, meeting transcripts, web URLs, and more — to provide an interactive, conversational knowledge hub that helps teams align better and act faster. Everything relevant to a project is stored in one space, and team members can ask questions, save AI-powered insights as notes, share context, and collaborate to advance goals.

**Adobe Express Premium**, a set of content creation tools, brand-safe templates, and Adobe Firefly image and video generation capabilities that help teams easily build impactful content that improves storytelling and communications. With the Adobe Express full complement of tools, users can create on-brand presentations, reports, infographics, social content, videos, and more — all on their own, without needing design skills or the help of specialized experts.

**Enterprise-grade content and data security** for businesses of all sizes helps IT leaders keep data safe and deliver trusted AI. Acrobat Studio is built with transparency, control, and security at its core, including enterprise-grade data encryption and clickable citations.

Acrobat Studio raises productivity across different business functions:

- **Sales:** Develop sales proposals, compelling client pitches, and responses to RFPs to build pipelines, foster relationships, and close deals.
- **Legal:** Analyze and review contracts to protect against legal risks, meet compliance requirements, and support business transactions.
- **Finance:** Report on financial assets and results, optimize financial planning, and create board-ready presentations.
- **HR:** Summarize policies, create onboarding materials and benefits documents, and employ AI to produce digestible, employee-friendly communications and training content quickly.

## The bottom line.

Organizations are ready to embrace AI-powered tools to work smarter and more collaboratively. With Acrobat Studio, IT can facilitate a new paradigm for modern work while minimizing administrative burdens and security risks.
